

Multidose Convenience – Preservative Free in the Eye

Traditionally, there have been two types of artificial tears: tears packaged in a bottle that contain a preservative (multidose bottles) and tears packaged in individual droppers that must be discarded immediately after one use and are preservative free (single-dose units). These preservative-free, single-dose units were developed for individuals with a sensitivity to preservatives. Since multidose containers are more economical, the ultimate artificial tear would be one that offers multidose convenience without causing preservative irritation.

All GenTeal® products contain GenAqua™, a disappearing preservative that turns into pure water and oxygen upon contact with your eye, thereby minimizing the irritation that may be caused by traditional preservatives while still providing the convenience and economy of the multidose form. All you feel is the soothing relief of the moisturizing ingredients, with the added assurance that each drop is as pure as the first.

These symptoms may be signs of other eye conditions. Consult your eye doctor.

A Product for Every Level of Dry Eye

***Mild dry eye sufferers
may experience:***

- gritty sensation
- tearing
- mild redness
- burning
- mild itching

Recommended product:
GenTeal® Mild

***Moderate dry eye sufferers
may experience:***

- irritation
- redness
- itching
- significant burning
- mucous discharge

Recommended product:
GenTeal®

***Severe dry eye sufferers
may experience:***

- pain
- persistent redness
- blurred vision
- severe itching
- frequent mucous discharge

Recommended product:
GenTeal® Gel
