

2nd Generation

High Definition Aspheric

HD2

“ The optics in the PolyVue 2nd Generation lenses are absolutely fantastic, the lenses are very, very comfortable and handle beautifully. I frequently use the HD2 for emerging presbyopes and it is working well. The HD2 and HDX2 are some of my favorite lenses to fit. ”

- Sue Mazure, Optician/CL Specialist

- Only patented aberration reduction lens on the market
- True high definition optics
- Versatile lens handles multiple issues
 - Nearsightedness
 - Farsightedness
 - Low Astigmatism
 - Emerging Presbyopia (EP)
- Unparalleled visual acuity
- Fit as single vision or EP with up to a +1.00 Add

2nd Generation

High Definition HDX Progressive

HDX2

- Only dual patented progressive multifocal lens on the market
- True high definition optics
- Reduced adaptation time
- 87.3% fitting success rate
- Maintains sharp distance vision
- Contours the cornea providing stability and minimal lens movement
- Effective Add from +1.25 to +2.50

I just received my new HDX2 Progressive Multifocal fitting kit. After trying them in my own eyes, **I can honestly say that they are hands down the best multifocal on the market!** I have been wearing contact lenses since I was 16 years old and am now almost 52. I have struggled to find a quality lens that did not take away from my distance vision. This lens has allowed me to read a piece of paper in my hand or a sign eighteen to twenty feet away all without reaching for my reading glasses even once! I was even able to adjust small screws in a pair of glasses without having to wear my own. **Without question, the PolyVue 2nd Generation lenses will be the first my office chooses when fitting patients.**

- Dr. Timothy Hennie, OD

2nd Generation

Together the new HD2 and HDX2 lenses form the most convenient and straightforward complete system to manage monthly replacement fittings for just about any patient in your practice. Incorporating a multi aspheric design that provides the ideal curvature for each lens power and the HD front surface that compensates for lens flexure on the eye, PolyVue lenses have been uniquely optimized for maximum spherical aberration reduction.

...Standard corrections, Emerging Presbyopes (EP), Mature Presbyopes and Modified Monovision; all with the ability to mask mild astigmatism...

Experience True HD Vision For Yourself!

The patented optics in both the HD2 and HDX2 naturally mask up to 0.75 diopter astigmatism. The HD2 can be fit as a standard single vision lens or to provide emerging presbyopes with up to a +1.00 Add power correction. The HDX2 is a progressive lens that builds on the superb HD2 foundation incorporating a center near progressive zone for +1.25 to +2.50 Add requirements. The progressive area of the lens smoothly transitions into the outer aspheric portion providing patients with the fantastic distance vision of the HD2.

Both lenses are manufactured with a state of the art Hypathin™ cast-mold process and incorporate PolyVue's signature Comfort Perfected™ lens edge design. With their 55% water content, these lenses stay fresh all day and provide superior comfort and unparalleled visual acuity that both you and your patients will love.

The PolyVue Family of Lenses

...Including toric lenses...

Monthly lenses in blisters:

HD2 - 2nd Gen. High Definition Aspheric

HDX2 - 2nd Gen. High Definition Progressive

Quarterly lenses in vials:

HD - High Definition Aspheric

HDX - High Definition Progressive

HD-T - High Definition Toric Aspheric

HDX-T - High Definition Toric Progressive

“ PolyVue lenses are **extremely easy lenses to fit with a very high success rate** and my patients are acutely aware of the comfort. Since the lens comes in the quarterly or monthly modality it gives me **a lot of options** and it is very cost effective in that it minimizes chair time. While it may not work on every patient it is **absolutely a lens to consider if you are fitting Presbyopic patients.** ”

- Arnold Bierman O.D.
